A compendious computation, from the birth of our Saviour vnto this present yeere 1614.

The birth of our Saviour Christ.	1614
Jerusalem was destroied by Vespa.	1531
England first receiued the christian faith.	1434
Brichus the first Monarch of England.	812
The conquest of England by D. William.	547
Printing was inuented.	154
King Henry the 8. conquered Bulleigne.	70
The contagious or great sweat.	63
Paules Steeple in London fired by lightning	53
The great plague at New-hauen and London.	51
The Earles rebellion in the North.	45
The blasting starre and sharpe winter.	42
The heauens were troubled with Meteors.	40
The generall earth-quake in England.	34
The beginning of the reigne of king Iames, the first of England complete in March the 24. is 11. but current 12. yeeres.	

Ane-

A neceſſarie rule to know the beginning *and ending of euery Terme, with* their returnes.

Hillary Terme beginneth the 24. of January, (if it be not Sunday) if Sunday, then it is reſerred vntill the day following, and endeth the 12. of Febuary, and hath foure returnes, that is to ſay.

Octabis Hillarii, Janu. 20.	Craſt. Purifica. Feb. 3.
Quind. Hillarii, Janu 27.	Octabis Purifie. Feb. 9.

Eaſter Terme beginneth the 11. of May, and endeth the 6. of June. and hath fiue returnes, that is to ſay.

Quin. Paſchæ. May 9.	Menſe Paſchæ. May 23
Tres Paſchæ, May 16.	Quinque Paſchæ May 30
	Craſt. Aſcenſi, June 3

Trinity Terme beginneth the 24. of June, and endeth the 13. of July. and hath 4. returnes, that is to ſay.

Craſt. Trinitat. June 20	Quind. Trinitat. July 4.
Octab. Trinitat. June 27.	Tres Trinitat, July 11.

Michaelmas Terme beginneth the tenth day of October, (if it be not Sunday,) and endeth the 28. day of November, and hath eight returnes, that is to ſay.

Octabis Mich. Octob. 7.	Craſt. Animar. Nouem. 3.
Quinden Mich. Octo. 14.	Craſt. Martini Noue 12.
Tres Michaelis, Octo. 21.	Octabis Marti Noue. 19.
Menſe Michae. Octo. 28.	Quind Marti. Neue. 26.

Note alſo, that the Exchequer openeth eight dayes before any Terme begin, except Trinity, in which it openeth but foure dayes before.

A ii.

The Anatomy of mans body as the parts therof are gouerned by the 12. signes of the Zodiaque.

Aries, the head and face

Taurus, The neck throate

Cancer, Brest, stomack

Virgo, Guts & belly.

Capricornus, knees.

Scorpio, Secreet members

Gemini, the armes & shoulders

Leo, Hart and back

Libra, Reynes & loynes

Sagittarius, Thighes.

Aquarius, The Legges

Pisces, the feet

What Meteorolcopist or learned in Astronomie, wil not obserue this axiome, *quòd sanguine per venam ferro lunæ existente, in signo partem respiciente periculosum est*, that it is most dangerous to let blood, the Moone being the signe, ruling the member cut, *nam cum ea totum corpus humectat, id membrum præcipue humoribus implet, quod ei signo subiicitur, per quod tunc ipsa discurrit, ex cuius humida humectatione magnum ei nocumentum afferri potest, si ferro tunc ictum fuerit.*

This moneth requires warme cloathes & fires,
and wine that is full pure:
Hot meates also it doth allowe,
and exercise be sure.

KEENE.

¶ A briefe Prognostication, for the yeere of Grace. 1614.

Being the second yeere after the Bessextile.

Wherin is generally inserted the state of the foure Quarters of the yeere, with diuerse Notes and Directions, both of Physicke and Astrologie, very necessarie.

Compiled according to the most exquisite Obseruations and Hypotheses of the learnedst Writers.

By *Iohn Keene*, Teacher of the Mathematiques, and Practitioner of Physicke.

LONDON,

Printed for the companie of Stationers.

Cum Priuilegio.

To the courteous Reader.

MAny be the reasons (*gentle Reader*) that ha
instigated mee to continue, not onely the
my yeerly labours, but also my priuate studies
the Mathematiques, & amōgst the rest, that *Ax*
ome worthie of memorie, to wit, *Mundus iste*
quasi Lyra, ab excellentissimo quoddam artifice conc
nata: cuius chordæ sunt huius Vniuersitatis res singu
quas qui dexterè tangere pulsareq́, nouerit, mirabiles
elicíet harmonias; Then the instant requeſt of
worſhipfull deere Friends and Countreymen,
whom in all dutie I haue bene alwayes oblig
cōmending to them the protection & correct
of this my third yeeres labour. To conclude,
continuance & fellowſhips of others, learned
the Mathematiques, whoſe conferences and il
ſtrate demonſtrations in *Arithmetique*, *Geomet*
Coſmographie & *Aſtronomie*, ſeem very delightf
Thus being as willing to profite my Countre
thoſe that be beſt able, I commit theſe my C
lections to be hammered at the Anvild of skil
Artiſtes, and in the meane time let *Zoyliſtes*
Momus crewe beware the flaſhes.

As Muſikes *ſymphonie of* Soundes *ſucceedes,*
As from one point Perſpectiue *knowes,*
As Rithmetique, *from Leaſt proceedes*
As from Geometrie, *Dimenſion flowes,*
So doth my Labours all make ſpeede,
For Countreys good at their greatſt neede.

An easie Table for such (as know not how to Adde or *Substract*) to finde the Tydes, in all, or the most principall Portes about this Empire.

¶ Example.

ſire to know the Full water at London Bridge, this yeere our Lorde, 1614. the ſecond day of Februarie. I finde by les heerebefore ſhewed, the ſecond day of Februarie, the ne to be foure dayes old: I ſee alſo vnder the Title where lon is, S. W. which Letters ſignifie, that a South weſt e maketh a full Sea there, and that is at 6. a clocke and inutes paſt: This is well perceiued, if in the firſt Co- t towardes the lefte hand, you runne downe to the fourth f the age of the moone, and ſo carrie your Finger in a right till you come to the place deſired, as is before ſhewed.

By theſe Tables you may knowe the moone comming to outh, when ſhee riſeth and ſetteth, with her continuance in our Hemiſphere, (which to doe) you muſt firſt ſeeke out the of the moone (as I haue taught) and then reſorte to the firſt e Table, looking out that Age there: So vnder the South e, in the ſecond Columne towardes the right hand, the appeareth of her comming to the South, then ſhe hath halfe that Arke that the Sunne would haue had in that re, which ſubſtracted, ſheweth the Riſing, that halfe Arke aded to her comming to the South, ſheweth her Setting: Arke then that the Sunne would haue had in the ſigne, is ontinuante on the Earth.

Note that you may finde the Age of the moone in the Ka- r, for that at the firſt Quarter ſhe is ſeuen dayes and halfe at the Full fiftreene dayes, at the laſt Quarter, 22. dayes and e, and changeth the 30. day.

ow particularly; When ſhe is an houre old, ſhe is 2. minuts e behinde the Sunne, For euery houre two minutes, till come to her Full, and then count againe, from the Full to Change: For aſſoone as it is an houre after the Full, the ne gathereth her 2. minutes nearer the Sunne, and for eue- houre encreaſing 2. minutes, till ſhee come to the Continucti- of the Sunne, and ſo chaunge againe, and is called a Newe ne.

The particular effects of those two Neighbour
I meane the Earth and the Moone, from the
scite to the Orbe of light, commonly called
the Eclipses of the Sunne and Moone.

The two illuminate and darke bodies, the Earth and t
Moone will obscure, and for a time deprive each other
light, twise this yeere, being in all foure Eclipses, but three o
that is, two of the Moone, and one of the earth (or as the v
gar say) the sunne will appeare in our Horizon.

The first Eclipse of the moone is the 15. of March, at 7
clocke 51 minutes at night, the diggets or fingers breadt
which will be Eclipsed, are 7. and 3. min. that is the time of
Eclipse, from the beginning to the midst thereof, the time
incidēce one houre 23. min. the totall duration will be 2. hou
46. minutes.

The second Eclipse of the earth, will appeare the 23. of S
tember, the Moone standing then in the Sunnes light to
Diggets and 30. min: which is halfe of his visuall Diamet
wanting 30. min whereof the whole is imagined to be 12.

The Moones Margent will seeme to touch the Sun
skirt, at 9. min: after 12. at noone, the time of incidence w
one houre and 5. minuts.

It will appeare at greatest obscuration at 1. a clocke and
minutes.

The appearance of their last Marginall touch will be a
a clocke and 19. minutes, for the whole continuance will b
houres and 20. minutes.

The last of the Moone happeneth the 7. of October, at
clocke and 26. min: in the afternoone, the earth hiding a th
part, and a little more of her grosse bodie from the sunshin
wit 4. degrees and 20. minutes.

The earth shall begin to shroud the Sunne at 3. a clocke
13. min: being directliest betweene the Sunne and the Mo
at 4. a clocke and 26. min: and the Moone getting out of
and growing into the Sunnes debt, shall have her faire day
agai

gaine at 5. a clocke and 39. min: for the whole time of her obscuration will be 2 houres and 26 minutes.

For the manner of the Eclipse of the Sunne, vulgar Astrologie maketh this Construction, that it happening in the 10. house, should betoken the fall of many honorable persons from their pristine estate and dignitie the abuse of magistracie and such which beare office, Venus being the dispositor of the Eclipse and of the 4. house, and the Moone going to her corporall ficon or copulation, yet the two luminaries inuironed (or as Astrologians tearme) obsessed with Iupiter and Venus, doe seeme to preferre a curteous indulgence.

Now for the dodecatemorie wherein it falls, being of that Trigon, Cardanus saith it signifieth the ouerthrow of poore Diuines and Schollers, and the little constancie of friends, and for the portion of the signe which is the first decane, he saith that a prioribus decem gradibus ciuilia bella efflagitat ac prægnantes infortunat, but suppose this be true (as I will not warrant it) causa qua supra, yet it will be the lesse fatall, because of other iudicials which I will not here stand vpon.

Note that the Eclipse of the Sunne (in our Hæmisphere) is alwaies by day, and of the Moone by night, as for them that would be resolued more particularly, I referre them to the conference of my selfe, or to some other more iudicious.

Cautions in Phlebotomy and bloodletting.

AVicen saith, that in Phlebotomie 4. things are to be considered, that is, first, time, for in extremitie of heate or cold, it is inconuenient for 3 causes. 1. in respect of the disposition of the bodie, because the bodie is very open, and the diminution of blood openeth it more. 2. through inflamation of the spirits and humours, Phlebotomy inflameth them more, 3. because the ayre compared to a Bath, drawing the humours from the Center to the circumference, but Phyſicke drawerh from the circumference or extreames of the bodie to the Center Secondly, it is not fit to let children blood, before they be 14 yeeres old, because of the tendernes of their veines, nor old men after they be 70.

by reason of their decrepit weakenes. Thirdly, vse and custom is to be respected, because the vnaccustomed are not to be l blood vnlesse necessity vrgeth, as in the Squinancie, Apopler and other violent maladies. Fourthly and lastly, the strength the bodie is to be respected.

Let blood the Phlegmatique the Moone in	Aries the head excepted. Sagittarius the thighes excepted.
Let blood the Melancholie, the Moone in	Libra, the first halfe, buttockes e cepted. Aquarius, the legges excepted.
Let blood the cholericke, the Moone in	Cancer the breast excepted. Scorpio the secrets excepted. Pisces the feete excepted.
Let blood the Sanguine the Moone in	Taurus the necke excepted. Virgo the bellie excepted. Capricorne the knees excepted.

Phlebotomie is not to be vsed the ☽. being in ♌ or ♐. or the signe ruling the meber cut: nor ventoles to be applied, the ☽ being in ♑. according to the opinion of Almanor, li. 15. cap.

The Aspects of the planets hindering the extraction of blood.

Conjunction of the Moone with the	Sunne hindereth a day before & a day after	
	Saturne a day before and after.	
	Mars hindereth a day before and after.	
	Mercurie 12 houres before & after.	if com
	Venus 12. houres before & after.	bust.

In the applications following you may securely Phlebotomize.

A Conjunction, trine, or sextile of the moone with Iupiter, al with Venus, if not combust.

A quartile and opposition of Luna with Iupiter and Ven not combust good, so that the Moone be in some good signe. trine and sextile of the Moone with the Sunne Mars or Saturne, if the Moone be in a good signe.

Le

et blood { Youth from the change to the first quarter,
Middle age from the first quarter to the full,
Elder yeeres from the full to the last quarter,
Decrepit from the last quarter to the change.

et blood { Sanguine from the change to the first quarter,
Cholericke from the first quarter to the full,
Phlegmatique from the change to the last quarter,
Melancholie from the last quarter to the change.

Whatsoeuer is heere spoken of Phlebotomie is to be referd in like sort to Ventoses.

Cautions in ministration in Phisicke laxative or purgations.

Seeing that these inferior and sublunary mixt bodies are gouerned of the Superiour and simple bodies, and especially by e motion of that our neighbour planet the Moone vseallee, rie, and differ, not for that she exceedes the rest in vertue and wer, but because she is neerer vs and swifter in motion, for eser the Moone encreasing, humors encrease, and when she ecreaseth, humors decrease, for the bones in the full of the oone are full of marrow, all liuing creatures both on sea and nd are then augmented in humiditie, as the Crab, Lobster nd Oister &c. also humors in mans bodie and in plants are hen encreased, for when the Sunne and Moone are in hote gnes, heate is increased, in cold signes, cold exceedes heate, herefore haue we iust cause in purging of humors to consider he motion of the Moone through euery signe of the Zodiacke, ot onely in purging of humors, but also in curing diseases and e the strengthning the faculties or vertues, I doe not say that e must haue onely recourse to the moone, but to the rest of the lanets, for Saturne increaseth melancholy, because he is cold nd dry, Iupiter Sanguine, because he is temperately hot and oist, Mars choller, because he is hot and dry, Venus and the oone phlegme, because they are cold and moist: the time fittest o purge, this table following directs you.

The

The Moone taking her progresse through these signes, and having these aspects, it is very fit to evacuate humors

- In Cancer and with a sertile or trine.
  - Of Venus, it auaileth to purge choller
  - Of the Sunne or Mars Phlegme,
  - Of Iupiter Melancholy.
- In Scorpio and with a sertil or trine aspect.
  - Of Venus choller,
  - of the Sunne or Mars Phlegme.
  - Of Iupiter melancholy.
- In Pisces with a sertile, or trine aspect.
  - Of Venus choller.
  - Of the Sunne or Mars Phlegme,
  - Of Iupiter melancholy.

As in purging of humors, the motion of the Moone is to be considered, so likewise in strengthning of the faculties of the bodie after the same forme.

The Moone being in these signes, the faculties are strengthned.

- In fiery signes hot and dry.
  - Aries
  - Leo
  - Sagittarie
  - the vertue attractiue.
- In earthy signes cold and dry as
  - Taurus
  - Virgo
  - Capricorne
  - the vertue retentiue.
- In aiery signes hot and moist, as
  - Gemini
  - Libra
  - Aquarius
  - the vertue digestiue.
- In watery signes cold and moist, as
  - Cancer
  - Scorpio
  - Pisces
  - the vertue expulsiue.

Cautions concerning bathes.

The fittest time for bathing is the time prescribed for Phlebotomy, howbeit if you bath for cleanlines, let the Moone be in Libra or Pisces well aspected of Venus, but if for health, if the

he infirmitie be cold and moist or requireth Euacuation, let the Moone be in fiery signes, Aspected with a good aspect of the Sunne, if hote or dry, let the moone be in watry signes, aspected with Iupiter or Venus.

Take	Purge by neezing, vomites, glisters, Gargarismes, Preparatiues, Hop rumes, and flures.	the moone in	Cancer, Leo, or Virgo, Taurus, or Capricorne, Aries, Libra, or Aquarius Cancer or Aries, Gemini, Libra, or Aqua: Taurus, Virgo, or Capricorne.

To conclude, I thinke it meete (before the Phisition apply any medicine to cure a disease) that he frame to himselfe a Syllogisme in Darij, though he be neuer so well experienced, as if we should speake after this manner, Euery feuer which springeth from cold and moyst humors, ought to be cured with medicines hote and dry (taking the token of the cause) this feuer which the man endureth, dependeth on humors cold and moist, therefore the same is to be cured with medicines hote and dry.

Elections

¶ Elections according to the *Aspects* of the *Moone* to the *Planets*.

♂.	✶.	☌.	△.	☿.
♄. An infortunate day, take no iorney, speake not to olde men, auoyd the cõpanie of husbandmen.	Conuerse with olde men & husbandmen, build, plãt, and graffe, seeke not the loue of Women.	Conferre not with olde men, take no phisike or iourney, deferre thy desire.	Conuerse with olde men, or husbandmen, Repaire thats ruinous, and manure Gardens.	Oyle nor seruants, seeke not for thy lucre, take nothing in hand, for feare of had I wist.
♃. An infortunate day goe to Noble men and Iudges sue for thy right, and take counsell	Conuerse with Lawyers & Ecclesiasticall persons, reade the Lawes.	Applie the studie of Philosophy take counsell, & seeke iudgement.	Beginne any honest work, make your iourney to kings and Iudges.	Iourney. Make thy iourney to Iudges and persons of the Church.
♂. An vnfortunate day, take no iorney, auoyde the cõpanie of soldiers, and warlike men.	Vse weapons, or horses, hyre champions, and kindle thy fire for Alchymie.	A day of mill of feare auoide contentions, make no eagne, nor ioyne friendship.	Dispose of all things for warre, buy Cattell or Beasts.	Flie company, Friendships, and loue of Women, take no iourney.
☉. Begin nothing but that thou would'st haue hidde and secret.	Labein vaine the affaires of Kings. sue to them, for offices & preferments.	A day to be eschewed in all things, deale not with companie of Peeres.	Offer Presents to Princes, your sute will be heard of them	Sue for iudgement of Peeres or Iudges, but auoyde Rich men.

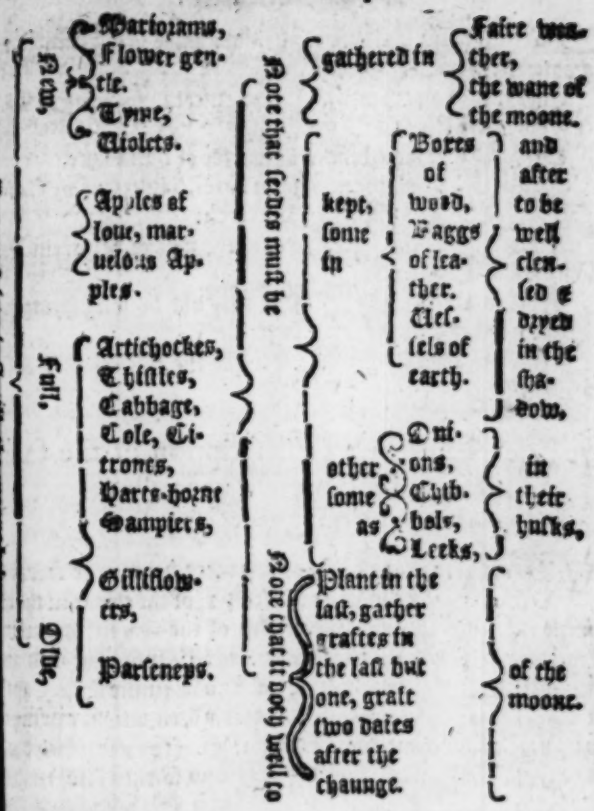
☉.	☽.	♂.	☿.	♃.
A day fit for pleasures & delights, seeke the loue of Women, and sue to them.	A day fit for Amorous sports, contract marriage, & seeke for all kind of ornaments it is a prosperous day.	Hyre Seruants or Workmen, make sports marry thy wife.	Seeke the loue of Women, & put on new garments, if the moone be not in Leo.	It is good to hyre seruants, take sports, & pastimes, and contract marriage.
Begin writings and Accounts, Chiffer, send messengers or Carryers,	Applie studies, make Accounts, take charges, sende Youthes to schoole.	It is good to send Embassadors, Orators, make your iourney. buy and sell.	copole verses, which require a subtile inuention, exercise send children to Schoole	Repaire to Scribes, send messengers, vse merchandise, studie.

I thinke

¶ I thinke it meete to adde some Elections for the good Huswife, touching the Sowing of her Seedes.

New,	Garlicke, borrage, buglosse, coriander, marioram, white poppie, Purslane, raddish, sorrel, Tyme, Violets.	In May, in the olde of the moone, the Blessed Thistle. In June, in the new ☽. Gourdes, Raddishes, in the olde, Cucummers, mellons, Parsnops. In Julie, the ☽ being in the Full, white succorie: being old, Cabbage, Lettuce. In August, the ☽ in the ful, white Cocoy.
Full,	Musked Anise, Beetes, Scirwoorts, succorie, Fennel, Apples of Love.	Understand that the choise & age of Seedes is double, for after you haue chosen them Ripe, Full, corpulent, grosse, and of a good colour, and not falling to ponder through rottennes, or bruisednes.
Olde,	Artichokes, basill, thistles Cole cabbage, Citrons, Cucummers, Hartes-horne, Sampier, Dyers graine.	Some doe grow better, of newe seedes, as Leekes, Cucumbi Other of old seedes (as) Coriand: parsle, Cucorie, beets, organum, spinage, poppie, cresses
	Spinage, hyssope, Flowr gentle, burnet, Leekes, Savorie, mellons.	Knowe further, that you must preserue from the colde Lettuses, Artichocks, Basill, thistles, Cabbage, cole, melons, Dyers grain 15. dayes after they put forth of the Earth. Knowe that Seedes prosper better when they are Sowen vpon warme dayes, then in hote, or colde, or drie dayes.

Mar-



Cautions concerning husbandrie.

Dw the Moone in Taurus, Cancer, Virgo, Libra, & Capricorne, in the encreale of the Moone, with a good aſpect of Saturne, Iupiter, or Venus.

Plant or graffe when the Moone hath her being in any fixed ſigne, either in Taurus, or Aquarius, in the encreale.

Fell

Fell timber for building from midsommer to Christmas, the moone in the wane.

Hayze cut groweth well, the moone increasing, being in Taurus, Virgo, or Libra.

Cut coppice or kewell the first quarter of the moone.

Geld or lib cattell, the moone in Aries, Sagitarie, or Capricorne, cut Clime in February or March.

Remoue trees the last quarter of the moone, betweene the louetide and Twelfetide.

Fell fire wood that the stocke may not be long springing from the chaunge to the first quarter.

Remoue grafts or young trees at the last quarter of the moone.

A Briefe and generall description of the four quarters of this present yeere. 1614.

And first of the winter quarter.

WInter being the first part of this yeere, begins the 12. day of December at 45. minutes after 12. of the clocke in the afternoone, this spharicall Systeme of the Sunne departing from that celestiall signe Sagitarie, entreth into that cold and dry melancholy, sharpe, nocturnall and feminine signe Capricorne, hauing then his most Southerly declination, causing in this part of our clime shortest day, bringing to those which dwell vnder the equinoctiall two winters, and so this said hyuma season continueth vntill the 10. of March.

I finde that the dispose of this quartile reuolution by many circumstances collected from the daily positions and nature of this of ours with the other fiue planets, and all of them in the globe of light) will fall out (I doubt) somewhat more open and fleeting, then his due temperature (cold and moist) requireth with many turbulent and tempestuous snowes with hard frosts very much exceeding the yeere last. 1613.

Diseases incident to such a season Philosophie argueth (from the causes) to be Catarres, noisome feauers, Lasks

squ

quinancies, Apoplexes, Palsies, Rawnes of the stomacke, Coughes, Reumes, Hoarsenes, singing in the Eares, fluxes, smal- a defect in the second concoction.

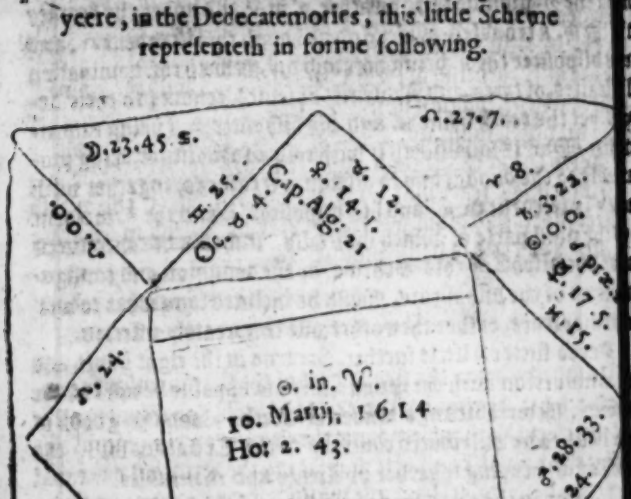
For the preuenting of these and the like, I wish the counsell of the learned Phisition be imbraced.

As for other iudicials, I will not heere treate of, concealing e causes (after the ground of art) till their effects take posse- on, which (I feare me) will be about the latter end of this arter, daring to diuulge litle, but praying to God to frustrate e effects of these so bad significations.

Of the Spring time.

The Spring being the second part of the Astronomicall yeare, takeeth his beginning the 10. of March, 39. minutes after of the clocke in the afternoone: the Sunne entring into Aries being the vernall equinoctiall, making the artificiall day equal with the night throughout the world, and is not naturally in mperature hot and moyst, as many Philosophers maintaine, t in a meane without all excesse, as Galen proueth the equall irture of the foure first qualities in it, (to wit) of heate and ld, moist and drouth is the cause both of the meane tempera- re, and also of the wholesomnes thereof: for of all times of the ere this is the temperates as Hipocrates affirmeth, the meats hich we should eate at this time, should be of good nourish- ent (because the blood chiefely encreaseth) for such meates, ch blood, and such blood, such state of bodie.

¶ The manner of the habitude of this part of the yeere, in the Dedecatemories, this little Scheme represenleth in forme following.



Seeing I intend to flie a little with the waxen winges of vulgar Astrologie, I meane to take Dædalus counsell, medium esse utilissimum: and not to rely overmuch upon the rules of vulgar Astromancie. And first touching the inclination of this yeere, for that ♃. is principall governour in the theme and orientall, and ♀. having a participation in his regiment and occidentall, they are moist ♃. in the figure being in the ♐. with the ☉. moist and rainie weather, the ☽. going from a ☌. of ♃. to an ☍. and in a cloudie mansion of the ☽. likewise moist, the ♏. of ♃. and

the ☽. promise faire weather, ♃. in ♈. and vnder the beames the ☉. a troubled ayre. And although the Ascendent ♌. and his dispositer the ☉. being hote and dry, sheweth the domination Beanes, of trees, and Abatemēt of fruits, tending to their de- yet the tenth house ♑. and his dispositer ♄. (being dispen- trix Mar'i) qualifieth it with cold and moisture, being pro- able to the budds, alsso to all liuing creatures, together wi-h ♂. prefident in ♐ and his dispositor ♃. and the ♂. incident the most parte of which iudicialls. it should be conjectured at the dispose of this Scheme, by the dominion and configu- tions of the dispositors, should be inclined somewhat to wet moysture, rather then otherwise temperately affected.

Yet to flitter a little further, Saturne in the eight house, and coniunction with the Sunne, and his oppolite beames in the ond, sheweth strange kindes of deaths, and the goods of e dead to be distributed contrary to the Testators will, the lawfull heaping together of Riches and moueables.

Iupiter in the third house, and Lord of the fourth and eight ules, and ioyned with the Dragons taile, may premonstrate good yeere towards, and such as are in their Manage, if not much opposed by Saturne, and olde Saturne-like minded llowes.

Mars being in a hote and moyst signe, may somwhat intend e temperature of the Spring, but that he is Occidentall, and be- g in an Angle, and the leuenth house, her may be the author contentious warres and banishments, of strifes in matrimo- all rites, in the ouerthow of the fatherles in marriage.

Venus in her owne house and Lady of the tenth, in her Op- lite beames in the fourth, portendeth a yeere very fauoura- le for the preferment of Women to dignities, and they will ouer this yeere to be the best Carde in the bunch for the pre- ment of their frendes to Offices and dignities, if meanes, I say not extraordinary) be made vnto them.

Mercury in the eight house (and placed betweene two bour- full fellowes, Mars and Saturne) is like to haue a plentifull re of it, specially if Mars were not in pennirie, and Saturn t ouer couetous: but alas poore Scholler, there is no hope

left for thee, but in deade mens shoes, and somewhat for thou makest this progresse against Iupiter.

Luna being the naturall signification of the vulgar, opposed as in this Figure, argueth small hope of Friends, and vnconstancie of neighbours.

And this out of Vulgar Astrologie, on whose grounde can warrant no certaintie: therefore let the construction them be the more suspitious.

The diseases of this quarter will not be much vnlike those of the Winter, as Scabbes, Sowres, Morphewes, Frenzies, Hemrodes, Plurisies, and such like: from such and other contagious diseases, God graunt England may be free.

Of the Summer time.

All Globes (according to the Axiome) whose Axeis of position are Parralell, moue obliquely one to another: our Orbes Axis, inclining to the Sphærical bodie of Light, pronoueth surface to surface, with obliquation and Parallel: and now being the 11. day of Iune, within a fewe minutes of 6. a clocke at night, in his nerest pointe of inclination, sheweth euery part of his Superficies to the sunnes view, with greatest inequalitie and difference, and consequently this his inclination to greatest shewe of sunshine, and least shadowe on the sunne (after the receiued opinion) in the greatest Northerne declination: making with vs Northerne inhabitants, long day and shortest night: which eyther way taken, are vsually receiued for the third part of the Astronomicall yeere.

Hauing made construction of the Sphærical heauenly figure at the Sunnes entrance in the Summer pointe, I perceiue that will proue generally (according to his naturall inclination) hot and drie, and be otherwise disposed to much Thundering weather, about the midst of the Quarter.

The infirmities that are like to set vpon vs bodily this quarter, will be Apostumes, Hecteck agues, noysome sweatings, inflamations, besides pestilence: also new infirmities proceeding of choller, wherewith manie will be in danger of death, if Physition be prolonged.

ese things considered, I thinke it the best way to refraine
Rost and supper, from hote wine, hote spices, and salt fish
s, from hote filthy ayres, and to vse most coole & refrige-
g meates, and to take the counsell of the Physitian, before
sease be inueterated, that you may the more easily be cured.
d for that this season as (aboue said) will be more open,
by the spirits wilbe more dissolued and wasted, and so by
meanes the vertue digestiue wilbe weakened: so that our
all heat wil not be so well able to digest as at other times:
fore to feede hard at this time of the yeere (to wit, Sumer)
t full, but we must eate a little, & often (as Galen teacheth)
e læpe & parũ dendum: because we need more oft nourish-
g, being then the more consumed, through the openne of
pores, therfore drinke in more abundance wine being qua-

¶ Of Autumne.

my two Orbes, hauing their motion in a Perpendicular
ne to the other, including both their Axis obiect plane to
, directly each to other. But our darke, obscure, opacous,
hæricall Orbe, (the 13. day of September, at 30. secods
9. a clocke in the forenoone) pronoulting himselfe in such a
ude to the Globe of Lights conuexe, obiecteth each portis
his plane, in equall plane, to equall illumination: and so
th day and night alike long all this world ouer: the mo
of which habitude ensueth the beginning to the last Quar.
the Astronomicall yeere, called Autumne, or Harueste
s season of the yeere is naturally variable, & the ayre chan-
le in heate or colde: wherefore it is not colde and dri, as
ncient Philosophers deeme, but of vnequall temperature,
allen proueth, the discrasie or distemperature thereof, is
ry cause that maketh this parte of the yeere to bee so full
eases, that it not onely ingendreth vnused and vnaccusto-
griefes, but it reuiueth olde maladies, as Dropsies, Stran-
, Gowtes, Palsies, Collicke, and Illiacke Passions, Con-
sions, besides many other Flegmatique griefes.
